

AI SoundLab

audEERING's study platform for voice analysis. The first online platform for your research on voice, health and AI applications.

Vision & Mission

AI-based voice biomarkers will enable disease screening, early symptom detection, and enhanced therapy in the future. It's the solution for increasing voice related, neurodegenerative & psychological disorders.

- **Holistic:** quick results and long-term monitoring
- **Scalable** and globally applicable
- **Individual:** customized studies & experts' feedback
- **Secure:** GDPR compliant
- **Multi-platform:** web-based access

Detecting Diseases from Voice with High Accuracy

Physical and mental states are reflected directly in the voice. This enables an early detection of neurodegenerative diseases like Parkinson's and Alzheimer's. Moreover, our AI system can already achieve 82% accuracy in detecting COVID-19.
