# Unlock the Power of Voice AI with devAIce®

With audEERING's scientifically proven* AI technology, our state-of-the-art audio analysis AI devAIce® enables a new wave of empathic robots. devAIce® empowers a new wave of empathic robots, enables LLM models to comprehend emotions. We also supply emotion analytics for call centers, breakthrough market research, immersive gaming experiences, XR edutainment journeys and unparalleled voice training solutions.

Key Features

Emotion Detection (tone-based)
Decode emotional expressions in speech with emotion categories or dimensions.

Speaker Age & Gender
Enhance interactions for tailored responses and personalized experiences with our precise estimation.

Acoustic Scene & Sound Events
Elevate products with immersive soundscapes or safety enhancements.

Speaker ID
Revolutionize interactions with seamless user recognition and personalization.

Voice & Music Activity
Enhance user engagement by accurately distinguishing voice & music elements from background noise.

Audio AI for Software and Hardware

Integrate devAIce® effortlessly into your web- and cloud-based applications with the **devAIce® Web API.** It's the easiest gateway to Audio AI. Our versatile **devAIce® SDK** supports major platforms, from desktop to mobile and embedded systems. The models are also optimized for devices with low computing resources, such as wearables and hearables. Choose from two frameworks for a perfect fit.
